

Virtual Care Collaboration Service

VIRTUAL CARE COLLABORATION SERVICE (VCCS)

Addressing the challenges of healthcare providers, payers and ecosystem software vendors:

Enabling better patient centric care

In today's healthcare environment providers are having to compromise the quality of patient engagement due to many factors ranging from cost to specialty needs, communication barriers to resource limitations, all impacting investment decisions about the efficacy of patient journeys.

For healthcare providers, Virtual Care Collaboration Service is the only approach that supports numerous digital patient journeys oriented around patient centric care, including home care and virtual consultation, with the flexibility to accommodate many differentiating experiences.

Introducing Virtual Care Collaboration Service

VCCS provides easy and secure video communication and digital video consultation between medical staff, patients and family members. It helps expand options for better quality, highly optimized, efficient care while removing obstacles in healthcare providers relationships with patients.

VCCS is an end-to-end solution and underlying platform that transforms healthcare point interactions to digital patient-centric journeys and experiences. It enables healthcare teams around the world to deliver more effective, efficient ways of working, including best in class virtual and remote consultation and care, anytime, anywhere. VCCS orchestrates and digitalizes other healthcare services and procedures in the customer landscape, reducing overhead cost and adoption friction. And it's the only solution differentiating the digital patient journey through AI/ AR/XR care and consultation.

Virtual Care Collaboration Service:

- Connects, complements and orchestrates the healthcare landscape
- Optimizes investments and operations
- Orchestrates and rationalizes the IT landscape
- Improves patient and staff experiences

Virtual Care Collaboration Service delivers end-to-end, secure and compliant interactive digital experiences for :

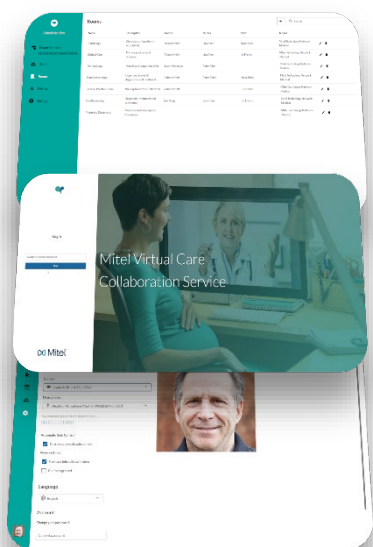

VIRTUAL CARE COLLABORATION SERVICE PERSONAS, JOURNEYS AND USE CASES

Personas > Journeys > Use Cases > Services and Solutions > Customer Outcomes
